

Here's your latest Coffee InfoFlo news

July 2018

Five things you need to know about ODE Rotary Pumps

- All internals are stainless steel and graphite (even the port threads are stainless steel)
- The body is polymer (PPS)
- They meet NSF food grade specification
- They run quieter (as polymer absorbs noise) and are lighter (so there is less load on the rubber motor mounts)
- Available in sizes: 100, 150, 200 and 300 litres/hour.

New Materials in our Group Head Valves

The product codes have changed in our sub-plate 4 screw group head valves. You'll see they now start with 316. We've also upped the specifications for you, so these valves now have:

- 316 stainless armature tubes
- 'Springflex'™ plunger springs.

This upgrade gives you an increased resistance to attack by trace elements in the water.

NZ Latte Art Championships

Well done to all the finalists in this year's Latte Art Championships.
